

Australian Network

Vision Statement

ODI Australian Network (ODI AU) will connect, equip and inspire people to innovate with data, catalysing open data for the benefit of everyone.

Mission Statement

ODI Australian Network will...

Be an effective, self-sustaining organisation that is valued and trusted by its stakeholders across government, industry, education, research and the community. It will strengthen the global ODI network, leveraging the network to create value in Australia.

Be acknowledged for building relationships and capability to derive economic and social value from data. It will enable tangible outcomes in areas important to the community, including health, education, transport, the environment and public safety. It will provide an effective independent broker for business, government, research and entrepreneurs to collaborate and solve problems using data.

Contribute to the creation of a professional, sustainable open innovation community with the capacity, knowledge and tools needed to create genuine value from data. Leveraging data and emergent technologies will position Australia as an advanced digitally-savvy economy driven through entrepreneurship and innovation.

Be instrumental in harnessing the contributions of research, education, training organisations, industry, nonprofits and members of the community to this end.

Be a place where people are imaginative, innovative, collaborative and committed.
It will be vibrant, inclusive and fun to be part of.

Goals/objectives

1. Inspire people to innovate with data.
2. Build the capability of Australians to innovate through data, facilitating good access to open data for everyone.
3. Extend the reach and contribution of the ODI network in Australia through demonstrated national leadership.
4. Develop strong partnerships across government, industry, not-for profits, education and research sectors to drive collaborative innovation through data.
5. Establish an effective business model which ensures financial sustainability.
