

Snap Shot of Achievements

We've built a community, a physical space where people feel welcome, included and engaged.

9 State Government departments

8 in Queensland and 1 in New South Wales utilised the Open Data Maturity Model to benchmark their maturity and embark on a pathway for improvement.

1000+

Australians reached with our regular newsletter distribution and have over 800 followers on social media.

350+

people brought together brought together to connect and build fruitful networks at our Lunchtime Lectures, discussion forums, classroom learning and Telstra Data Master Class series.

We have...

Coached and mentored numerous Open Data “hackathon” events.

Spoken at, presented at and been panelists at **17 national, international and local conferences.**

Launched an open, online community **discussion forum with over 250 contributors.**

Connected, equipped and inspired 1500+ people across the country to innovate with data.

Challenged our thinking and forged valuable relationships with over 150 members, supporters and sponsors through our ODI Connect series.

Expanded Australia's foundation membership and impact of the global Open & Agile Smart Cities initiative in coordination with QUT's Design Lab.

ODI Australian Network will connect, equip and inspire people to innovate with data, catalysing open data for the benefit of everyone.

Snap Shot of Achievements

We helped shape Australia's first Open Government National Action Plan, through our CEO's involvement on the interim working group.

We were identified as a key training and education partner

by the Department of Prime Minister and Cabinet in its framework report: Data skills and capability in the Australian Public Service.

We have made steady progress in conjunction with the local and international

ODI community towards localising and automating the award of Open Data certificates for Australian Open Data publishers.

We have advocated and influenced the national data and Open Data agenda

through submissions made on behalf of our community to the Open Government Partnership public consultation, to the Australian Smart Cities Plan, and to the Productivity Commission Inquiry into the availability and use of public data.

We have maintained a rewarding relationship

with state government through participation and contribution to advisory groups such as the Queensland Government's Senior Officers' Workgroup on Open Data; the Queensland Department of Transport & Main Road's Open Data Governance group.

We have been retained by the Queensland Government in a two year Open Data Partnership,

which establishes a framework by which we can support and assist government agencies to achieve their Open Data aspirations, through delivery of a series of project milestones.
